# AARON TAN

aarontan.dev · Singapore · natnoraa27@gmail.com · linkedin.com/in/aarontann · github.com/aar0ngit

Year 2 Diploma in Information Technology student (Cybersecurity & Cloud Computing) seeking a **software development internship**. I build and deploy full-stack web apps with Node.js, SQL and automated testing.

## EDUCATION

**Singapore Polytechnic** Apr 2025 – Apr 2028 (expected)

Diploma in Information Technology, specialising in Cybersecurity and Cloud Computing · **cGPA 3.71** (last sem 3.87)
Relevant modules: Software Engineering Practice, Front-End and Back-End Web Development, Continuous Integration & Delivery, Ethical Hacking Essentials

**Dunman Secondary School** · GCE O-Level 2023 – 2024

**British International School of Houston**, Texas, USA · Track & Field, Show Band (drums) 2017 – 2022

## PROJECTS

**Stubby: study partner matching platform (chat lead)** Team of 4 · May 2026 – present

*Node.js, Express, PostgreSQL, WebSockets (ws), WebRTC, Jest, Playwright, GitHub Actions, Render · stubby-bp2p.onrender.com*

- Owned the platform's entire real-time chat, front end to database: a JWT-authenticated WebSocket server, 39 REST endpoints and 11 PostgreSQL tables.
- Delivered one-to-one and group chats with typing indicators, read receipts, online presence, replies, reactions, pins, @mentions, search, drafts, polls, file and voice messages, a shared whiteboard, and WebRTC voice and video calls.
- Chat is covered by around 300 Jest unit and integration tests and 39 Playwright end-to-end tests, run on every pull request by GitHub Actions.

**Planet Hopper** Solo · Jan – Feb 2026, deployed Nov 2026

*Node.js, Express, MySQL (TiDB Cloud), JWT, HTML Canvas, Vercel · planet-hopper-three.vercel.app*

- Built a wellness challenge app with a browser runner game: challenges earn credits for a shop, loadouts and five planets with leaderboards.
- Designed a REST API of 30+ endpoints with bcrypt, JWT access and refresh tokens, and parameterised SQL throughout.
- Found and fixed a cheating hole: the server now times each run with a signed game token instead of trusting the browser.
- Deployed as a Vercel serverless function with a hosted MySQL-compatible database, and added one-click guest access.

## HACKATHON

**PolyFinTech100 API Hackathon 2026** Team · May – Jul 2026

*OCBC challenge: autonomous AI agents across the bank customer journey*

- Designed, as a team, an AI agent concept that anticipates customer needs and personalises advice, with a human approving key decisions, and pitched it to the judges.

## WORK EXPERIENCE

**Field Marketing & Merchant Activation Associate** · VISA Merchant Programme (via DGFX Studio) Part-time · Aug – Oct 2026

- Pitched VISA point-of-sale materials to merchants door to door and installed them in store.
- Kept outlet and item records so the team could track coverage across zones.

**Grooming Assistant** · Ruff Cuts Holiday job · 2026

- Bathed, dried and handled dogs of all sizes before grooming.

## SKILLS

| | |
|---|---|
| **Languages** | JavaScript, SQL, HTML, CSS |
| **Back end & data** | Node.js, Express, REST APIs, WebSockets, WebRTC, MySQL, PostgreSQL, JWT, bcrypt |
| **Testing & DevOps** | Git and GitHub, GitHub Actions CI/CD, Jest, Playwright, Postman, Vercel, Render |
| **Ways of working** | Agile and Waterfall, requirements and UML, technical documentation |

## ACTIVITIES

- SP Track & Field (throws): competed at POL-ITE 2025 and SA Inter Club 2025.
- Build and repair PCs, run home servers and make games; securing my own games against cheaters got me into cybersecurity.
