EDUCATION

Singapore Polytechnic · Diploma in Information Technology (Cybersecurity & Cloud Computing) — Apr 2025 – Apr 2028
Cumulative GPA **3.71 / 4.00** · latest semester **3.87**

Dunman Secondary School · GCE O-Level — 2023 – 2024

British International School of Houston · Texas, USA · Track & Field, Show Band (drums) — 2017 – 2022

PROJECTS

Stubby · Study-partner matching platform · Team of 4, I built the chat — May – Aug 2026
Node.js, Express, PostgreSQL, WebSockets, WebRTC, Jest, Playwright, GitHub Actions · **stubby-bp2p.onrender.com**

- Owned the platform's entire real-time chat, front end to database: a JWT-authenticated WebSocket server, 39 REST endpoints and 11 PostgreSQL tables.
- Built one-to-one and group chats with typing indicators, read receipts, presence, replies, reactions, pins, @mentions, search, drafts, polls, file and voice messages, a shared whiteboard, and WebRTC voice and video calls.
- Wrote around 300 Jest unit and integration tests and 39 Playwright end-to-end tests for the chat, run on every pull request by GitHub Actions.

Planet Hopper · Wellness challenge app with a browser game · Solo — Jan – Feb 2026
Node.js, Express, MySQL (TiDB Cloud), JWT, HTML Canvas, Vercel · **planet-hopper-three.vercel.app**

- Built the full stack alone: challenges earn credits for a shop, loadouts and a runner game across five planets with leaderboards.
- Designed a REST API of 30+ endpoints with bcrypt, JWT access and refresh tokens, and parameterised SQL throughout.
- Closed a cheating hole by timing each run on the server with a signed token; deployed on Vercel with guest access.

HACKATHON

PolyFinTech100 API Hackathon 2026 · OCBC challenge: autonomous AI agents across the customer journey — May – Jul 2026

- Designed with my team an AI agent that anticipates customer needs, with a person approving key decisions; pitched it to judges.

WORK EXPERIENCE

Admin & Reporting Automation · Service business · Holiday job — Sep – Oct 2026

- Automated the business's recurring admin in Python: sales reports, customer records, advertising statistics, marketing budgets and payslips now update from its systems on a schedule.
- Used AI-assisted coding, and built in backups and checks so the owner could trust the numbers.

Field Marketing & Merchant Activation Associate · VISA Merchant Programme, via DGFX Studio · Part-time — Aug – Oct 2026

- Covered a whole mall per deployment, including all of ION Orchard: pitched VISA point-of-sale materials to each merchant, installed them in store and logged every outlet for the team's coverage tracking.

SKILLS

Languages	JavaScript, SQL, HTML, CSS
Back end & data	Node.js, Express, REST APIs, WebSockets, WebRTC, PostgreSQL, MySQL, JWT, bcrypt
Testing & DevOps	Git and GitHub, GitHub Actions CI/CD, Jest, Playwright, Postman, Vercel, Render
Ways of working	Agile and Waterfall, requirements and UML, technical documentation

ACTIVITIES

- **SP Track & Field** (throws): POL-ITE 2025, SA Inter Club 2025. Outside school I build PCs, run home servers and make games; securing my games against cheaters got me into cybersecurity.
